

The Centipede with the Wings

Group members: John E., James, and Roman

Explain the type of pollution you are representing, and why it is bad. Then explain why you made your character the color, size and shape you did.

The type of ~~population~~^{pollution} the monsters creates is air pollutions. The causes of air pollution in this picture are car exhaust, acid rain, carbon dioxide, smog and dust. All of these things make the water coming from the roof into the street dirty. This can cause pollution in the city. Our flying centipede is snaking down the drain spout. The centipede has wings because the pollution started in the air. So it flies like the air.

We are showing a picture as coal smoke that comes out of the chimney. The coal smoke is from a chimney that the fire and wood creates. The coal smoke hurts your health. We used a circle of the head and we put swirly lines to show the smoke from the guy and we put chimneys with smoke on the buildings and we used black for the whole thing but we put gold on the windows. We call it smoke man.

Grace, Matt, and Faajah

“The Shadow Man”

We decided to do air pollution. Our idea for a character was a silhouette of a man hiding in the shadows, therefore, that is why we call him “The Shadow Man”. He is made of dirty, polluted air and causes terror wherever he goes. We wanted to show the damage of air pollution because dirty air is very dangerous to our physical health and it messes up the clean air that all of us need. We thought a man made of bad air was a good idea because air pollution is the issue we are addressing and a super villain type character would get people’s attention.

Polutry

Sawyer

Cat

Saeed

Type of pollution – air

We chose to make a project about a character that is a vulture named Polutry

This vulture represents air pollution emitting out of a chimney due to heating a home. It can cause cardiac arrest, global warming and depleted overall age.

We wanted our character to look indubitably sinister.

Title of work: Smoggy Mr. Pipes

Group members: Kayla, Liam, and Jaelen

Explain the type of pollution you are representing, and why it is bad. Then explain why you made your character the color, size and shape you did.

Our type of pollution is dirty water, specifically, dirty water caused by smog from factories, power plants, and cars. Dirty water is a bad thing because animals and humans that drink it could get sick or die. We made our character have a curved, flowy shape to represent water, and made it brown and black to represent dirtiness. The monster has wings to show that the dirt in the water spreads from the air.

Magnus
Kyron
Caroline

It damaged the house and the air. We chose our character because we liked him. The type of pollution we are presenting is fire and smoke. We chose black and grey because those are the colors of smoke.

Regeneld The Derpy Trash Monster

By Max, Max, and Brenna

We are representing trash pollution, and its damaging because trash can go into the bay witch can trash the water and the fish, heh, get it? Trash? We decided to make Regeneld kind of junky as you can clearly see. We also made him big because trash is a big problem. We also chose junky colors like, green, black, brown, and other stuff.

So please,

DON'T THROW TRASH

ON THE GROUND!!!!!!!!!!

Title: Graffiti Boppers Date: 3/4/14

By: Natalie, Julia, Mia

The type of pollution we are representing is graffiti. Graffiti is damaging because in the can there is a thing called aerosol. It is really bad for the environment when it's sprayed. We chose our characters because they're the people who do graffiti and so we just drew people on the picture to represent this problem.

Exhaustore Strikes

Group members:

Nolan, Julian, Bradley

We are representing how exhaust affects the air. It is damaging because it destroys the ozone layer. We made exhaust pipe arms. We made a key to start the car. He needs a driver license to drive the car.
