

Saving energy at home!

Why it's important it to save energy?

What you could do to help out?

It's important to save **energy** because it is **non-renewable** meaning that it will all be used up somehow.

1) Turn off lights when you leave the room.

2) Turn down the heat.

3) Open windows, so you don't use your AC as much.

You can help the environment and even **money**.

4) Turn off appliances and don't leave them in 'Stand by mood'.

That's why it is important to save as much energy as possible.

5) Run all needed appliances at night
