

Dear Mr. Lightfoot,

We are looking into putting a few rain barrels outside the school. While looking for a place to put them, we noticed that the rain water from the gutters has been running down along the side of the building and into a clogged drain. We would like to propose clearing the drain so the water does not pool anymore, and come up with a way to install rain barrels near the downspouts. That way we can stop the rain water from running against the base of the building, and make sure it is properly absorbed through permeable ground. We will need to speak to the schools resident architect to come up with a way to solve this, if you could help us set up a meeting we would be grateful.

Sincerely,

Chris Scholz and Josh Crenshaw

Zimbra

Dear Chris and Josh,

The letter is great. Did you send it to Mr. Lightfoot?  
Good luck with your project. I am inspired by your desire to help clean the Bay of the toxic material that flow off of our school roof during a rain storm. I am not sure that rain barrels are the answer. I am glad you are consulting the architect.

Thanks,  
Mrs. Child
